Step 3: Working with the Lasers

1. Download template from JuRo Server at
   https://juro.colorado.edu/.
2. Draw or import into template.
3. Delete imported non-template layers.
4. Don’t change the “0” or “Bleed” layers.
5. Bring your file to your scheduled laser appointment!

Important Notes:
- Dashed lines = traced border
- Anything larger will not cut
- Before lasering,
  - Cutting: Cut out the way through your material
  - Soaking: Place sample on surface to provide vector lines
  - Engraving: Leave inner lines, left behind

Note: You must use the Dwg2Fab file format, not your Design file format.
