

Bionic is an award-winning cutting-edge landscape architecture practice based in San Francisco, CA. Our approach to projects seeks to enable life in an increasingly complicated and urbanized world. We apply inventive creativity, optimism, and expertise to all that we do.

Our work spans a range of types and scales including public parks, workplace environments, institutions, waterfronts, private development, green infrastructure, urban design, and landscapes on structure.

Please visit our website at www.bioniclandscape.com for more information about our firm.

Internship Program

Internships are open to students and recent graduates that are US citizens, or international students that intend to work in the US under the STEM program for 3 years.

The concept of “internship” can mean different things to different firms. The goal of the Bionic Internship Program is to provide experience and exposure to the many facets of practice to Interns, and to test your potential to work in our firm at some point in the future.

The Internship Program is immersive. Interns have the opportunity to assist project teams and may gain exposure to various aspects of current projects including providing support for all phases of project development from concept design through construction documentation, design critiques, attending site visits, vendor presentations and speakers. Each intern is expected to prepare and give a presentation of their work at the beginning of their internship.

In the past, we have had talented interns from across the United States and world. Interns from countries outside of the U.S. are responsible for obtaining the necessary paperwork enabling them to work in the U.S. If necessary the firm will provide a letter stating its offer for temporary contract employment.

Due to the pandemic, Bionic is currently working remotely. Interns will be responsible for supplying their own computer with sufficient processing power for design software and internet bandwidth that meets our specifications for remote work and meetings.

To apply submit a PDF resume and portfolio (10mb max) to the email below By Feb 15, 2021

All submissions should illustrate a range of your best work and technical skills
